

STACKABLE WIRE FRAME STORAGE BIN  
ABSTRACT OF THE DISCLOSURE

5 A storage bin comprises a wire frame having a  
rectangular wire top element and a slightly smaller  
rectangular wire bottom element which fits snugly into  
the top element. The top and bottom elements are  
interconnected by wire side elements which are angled  
inwardly as they extend downwardly. Wire corner elements  
10 extend across each corner of the top element immediately  
below its bottom surface. Thus, the bottom of one bin  
can be placed into the top of another bin and only extend  
into it by an amount equal to the thickness of the wire.  
U-shaped handles are located on opposed sides of the top  
15 element. The bottom and sides of the bin are covered  
with a fabric cover. In a preferred embodiment the side  
elements are releasably attached to the top and bottom  
elements to permit the bin to be broken down flat.
